Job Stock Transfers

OVERVIEW

➤ **Overview**

The Job Stock Transfers utility allows stock items to be purchased for jobs, they are typically ordered directly as Materials for the job.

When the goods are delivered they get applied directly to the job.

This works well however if you want to track the full inventory usage, items purchased directly to a job are not reported or tracked.

➤ **How it Works**

The Job Stock Transfers utility works via the supplier delivery or the invoice form and once the delivery is processed the operator is asked if the stock is to be transferred to the Job. If they answer yes, stock transfers are done out of stock and into the job.

On the supplier purchase order the 1st line of the order must be the job code.
